

Computer Bytes – Maintenance

Provided By: Harv Oliver, HANDS-ON Consultations

Greetings and Happy Fall! If what I'm about to share sounds familiar it's because it is. Some items I share are new and/or one-time while others are issues that re-arise or require revisiting. This update is one of the latter.

Around the end of each calendar year I always think 'maintenance'. Often we come onsite, or bring a system to the HOC office, to help clients when there's a 'burning fire' we help put out. We address some type of issue that's affecting operations in some way that requires immediate attention. This in our world is what we consider "reactive support".

Outside of these immediate issues, for our business clients, we recommend and try to perform Server maintenance every six months. If clients don't choose the six month option, ANNUAL maintenance at minimum is recommended. Also, near the end of each calendar year, I recommend facilities Workstations/PC's maintenance. This last sentence is applicable to home user systems as well. This is what we call "proactive support".

A common goal for us, and for you to work toward with your computer(s), is whenever possible be proactive vs. reactive – try to stay ahead of problems as much as possible.

Again, this maintenance is beyond the 'fixing an issue that is wrong right now', which is an ongoing throughout-the-year activity. Maintenance includes cleanup, updates, security settings/fixes, recommendations for software updates/options, internal components/fans cleaning, verifying backup options, etc. It's also a good time to evaluate existing equipment. Some clients look to get those costs in before the end of the calendar year or just to make sure you're in the best shape possible to come out of the chutes hot in the New Year.

I will certainly admit this is a nice niche for our business. With that said, in all honesty, it's a win-win. You also get your operations gone through and make sure you're operating efficiently and on the proper path AND if there are any existing problems they're addressed as well. If you choose to do it yourself, so be it – it's a solid move on your part for keeping your system(s) running better. If you have not yet performed yourself I encourage you to give us a call for an appointment – we'll take care of you!

NOTE: Our sharing of information within articles includes suggestions and tips. USE AND/OR APPLY AT YOUR OWN RISK. If you have any questions or concerns, please contact our offices for professional service/guidance.

Until next time, don't forget your backups! For more information, contact Harv Oliver, HANDS-ON Consultations, (805) 524-5278, www.hocsupport.com
